STEELS ANNOUNCES DEALER AGREEMENT TO SUPPLY
DELTALOK® EROSION CONTROL SYSTEMS

Surrey, British Columbia – January 4, 2012 – Steels Industrial Products Ltd. is pleased to announce that the company has been appointed a dealer of soil stabilization retaining wall system products supplied by Trexiana Wholesale & Distribution Ltd. Effective today, Steels is Western Canada's source for the Deltalok® System of ecological engineering products designed for erosion and soil protection.

The Deltalok System evolves bag work construction practices by combining an innovative and patented interlocking method with a vegetated GTX bag. A Deltalok interlocking plate is placed between sand/soil filled Deltalok GTX bags to dramatically increase the sheer strength of the bag structure. The result is an interlocking soil mass that promotes and sustains vegetation. "This line is a great addition to our product offering," explains Steels president Jim Sidwell. "Deltalok is the only permanent system available that provides a vegetated face for slopes and walls in erosion control, slope repair, bank protection and earth retention applications". Deltalok offers the strength of stone and concrete with the natural beauty and environmental benefits of a grassy bank, a field of flowers or even a forest-scape. "It is a fantastic environmental solution," adds Sidwell.

Trexiana Wholesale & Distribution Ltd. is the exclusive distributor of Deltalok System products in Western Canada. Based in Surrey, BC, Trexiana provides expert engineering and design support for all Deltalok System Products. Additional information is available at www.trexiana.com.

Steels Industrial Products Ltd. is a division of the FAMA Group of Companies, and is headquartered in Surrey, British Columbia. Steels is Western Canada's source for expert product knowledge and a complete line of building materials across our insulation, roofing, general contractor and masonry divisions. With nine locations across British Columbia and Alberta, Steels has provided contractors, builders and architects with construction supplies since 1955. Additional information is available at www.steels.com.
